«Imagine you could check all your amps and cabinets with only one guitar chord. Here is the solution»

The **Amplifier/Speaker Selector** is a system which allows you to connect 8/4 amplifiers to 4 speakers, providing the possibility of easily selecting combinations of amplifiers and speakers. Thus avoiding the loss of time and making day to day work easier. Being useful for recording studio and live performance.

Thanks to **Kahayan 8/4x4 Selector** we can change the amplifiers and speakers with only one button, that means, if everything is connected correctly you can link the amplifier that you want with the speaker of choice with simple touches of the dial.

## How it was created:

After several suggestions of **Ludovico Vagnone** guitarist, Pablo Kahayan started developing a prototype of what is now known as the 4x4 selector. After many trials, Pablo found the perfect circuit to keep the purest possible signal. In this way you could combine different guitar amps with different speakers. After 4x4 selector the 8x4 was developed. Thanks to Ludovico Vagnone for all his contributions.
